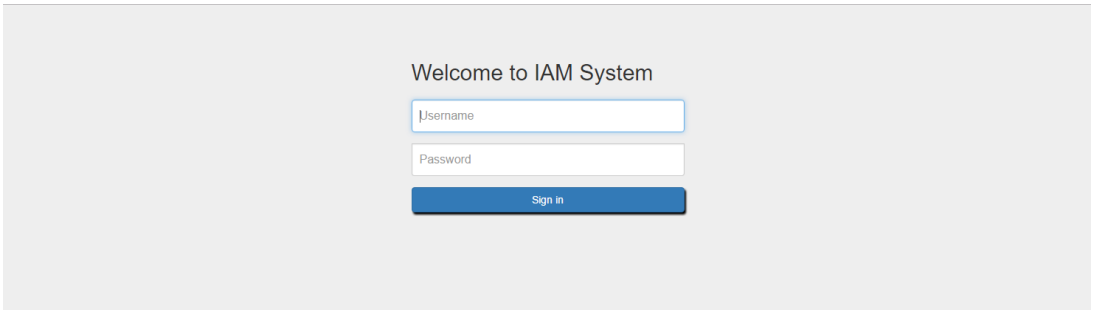
IAM System User Guide

By Zexin Lin

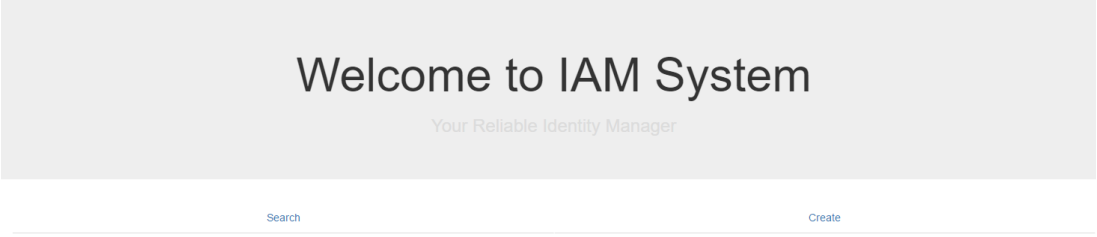
1. Login



The user should enter the correct login and password to sign in the IAM system. (Register interface is not provided, login and password are both hardcoded as “admin”)

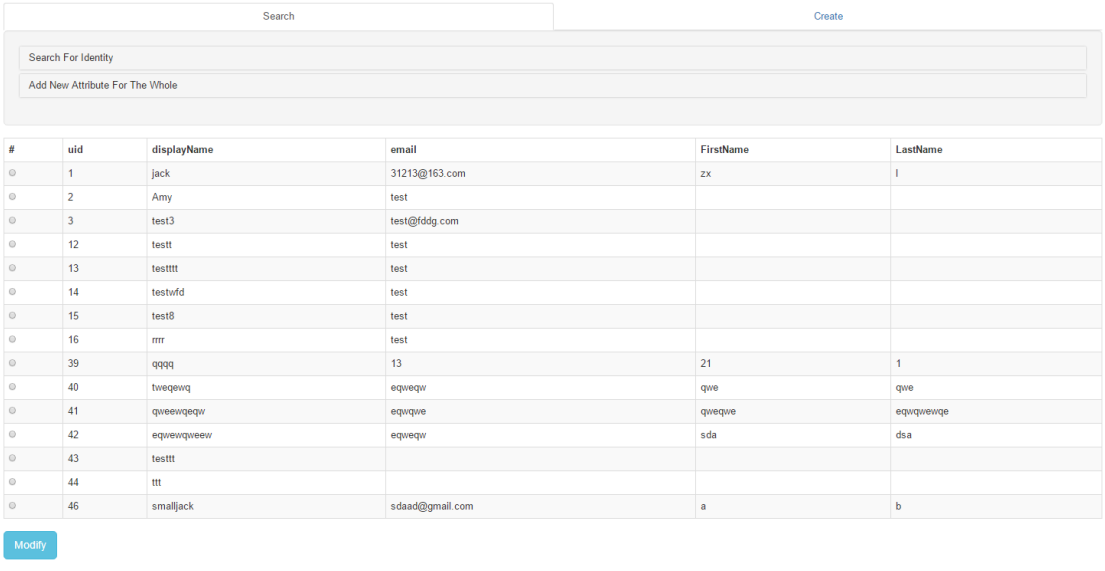
2. Homepage

When the user login successfully, home page will be displayed, which contains two tab panels in charge of Search and Create module.



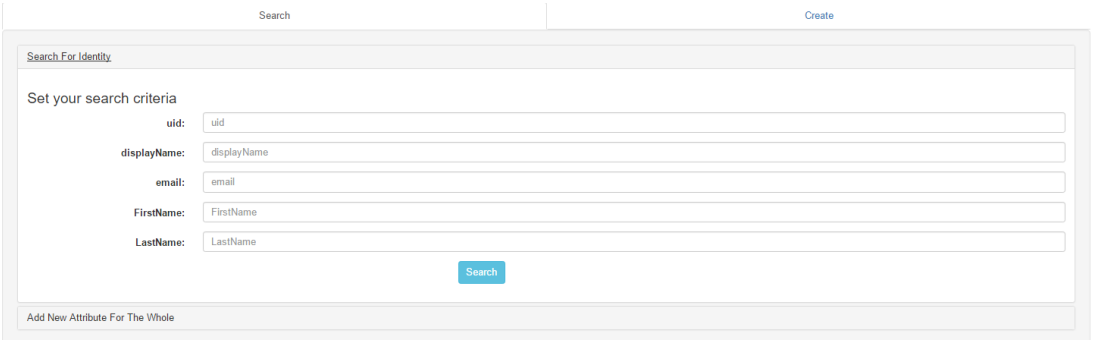
3. Search tab

When the user clicks Search tab, all identity information will be displayed.



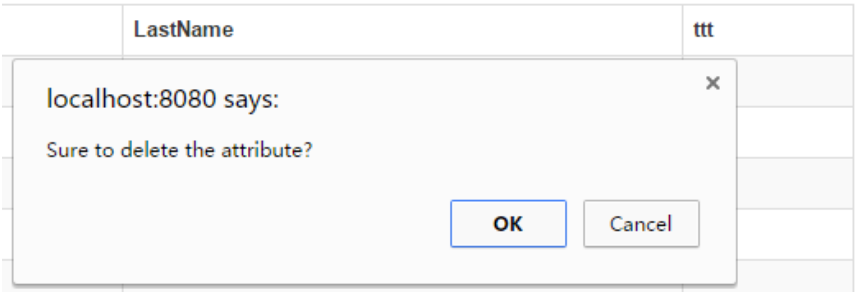
#	uid	displayName	email	FirstName	LastName
	1	jack	31213@163.com	zx	l
	2	Amy	test		
	3	test3	test@fddg.com		
	12	testt	test		
	13	testttt	test		
	14	testwfd	test		
	15	test8	test		
	16	rrrr	test		
	39	qqqq	13	21	1
	40	tweqewq	eqweqw	qwe	qwe
	41	qweewqeqw	eqwqwe	qweqwe	eqwqwewqe
	42	eqwewqweew	eqweqw	sda	dsa
	43	testtt			
	44	ttt			
	46	smalljack	sdaad@gmail.com	a	b

When the user clicked Search For Identity tab, search form will be displayed, which search for identities using the criteria filled in the form



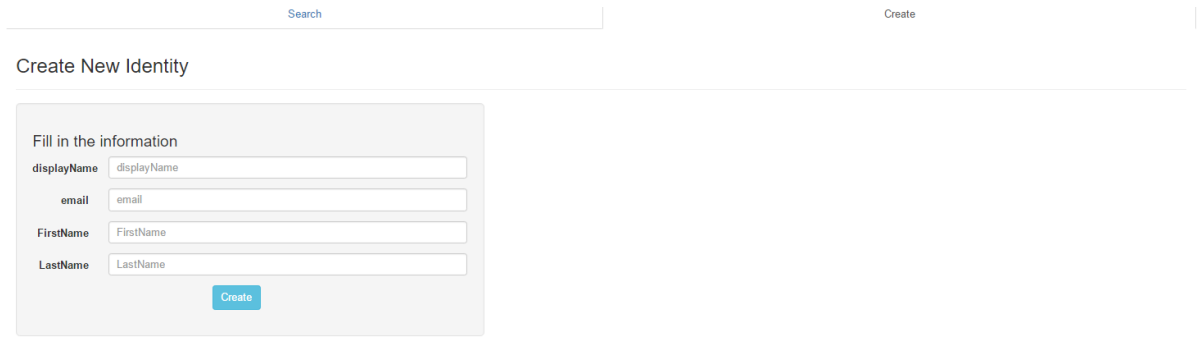
When the user clicked Add New Attribute For The Whole tab, user can enter the new field name to add it as public attribute for all the existing identities.

When the user click the attribute in the first row of the information table, the clicked attribute can be deleted.



4. Create tab

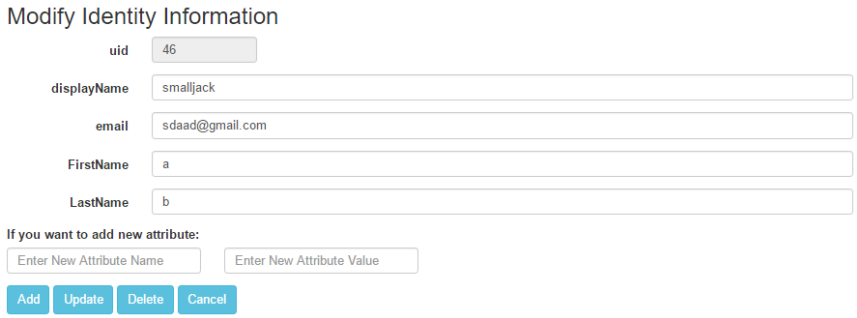
Create a new identity using the information filled in the form

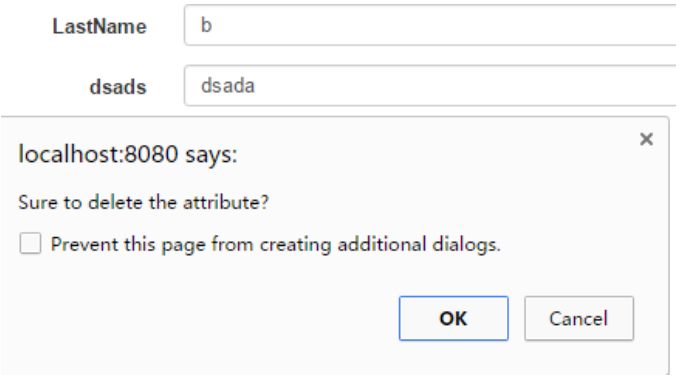


5. Modify window

When the user select a piece of identity information and click Modify, detailed information for the identity will be displayed in the new window.

User can add/delete a new private attribute, update identity information, delete current identity in this page.





The user can delete a private attribute by clicking the attribute.
